

KAATOPASSI®

BROCHURE

| WIDTH | LENGTH | HEIGHT | WEIGHT |
|-------|--------|--------|--------|
| 20 mm | 500 mm | 50 mm | 300 g |

Application

Kaatopassi is a spirit level intended for wet room fitters and supervisors. The product is designed to help with regulation checks of wet room floor falls (sloping).

Measuring

The level features four vials. The 1:50 and 1:100 vials help measure falls while the 90° and 180° vials work for standard levelling. The level is suited for measuring falls in wet rooms.

Place the end marked "1:50" against the floor drain (low point). The fall is correct once the bubble in the 1:50 vial or the 1:100 vial sits in the middle. If the bubble is on the positive side (+), the fall exceeds the minimum required. If the bubble is on the negative side (-), the fall is insufficient.

Regulation floor falls

Wet room floors must have a fall of 1:100 in general and 1:50 within 50 centimetres of the floor drain. The Kaatopassi level makes it easy to check for these falls.

Materials

The Kaatopassi level has a sturdy slotted aluminium frame. The precision-machined bottom ensures optimal measuring accuracy. The vials are accurate to within 0.5 mm/m, giving a maximum error of 0.25 mm across the length of the tool. The vials are shock- and UV-proof.
